

BBMe Ping

An audible alarm for BBM priority messages – even when silenced

BBM Enterprise's priority messages (formerly "PING") do vibrate, but play no sound of their own against the silence setting – on a silenced phone they're easy to miss. BBMe Ping closes that gap: a freely composable tone/repeat pattern, depending on the sender and the phone's current mode, deliberately routed through the alarm volume channel so it stays audible even in "Silent" mode. Written from scratch – no BBM code, no bundled BBM sound.

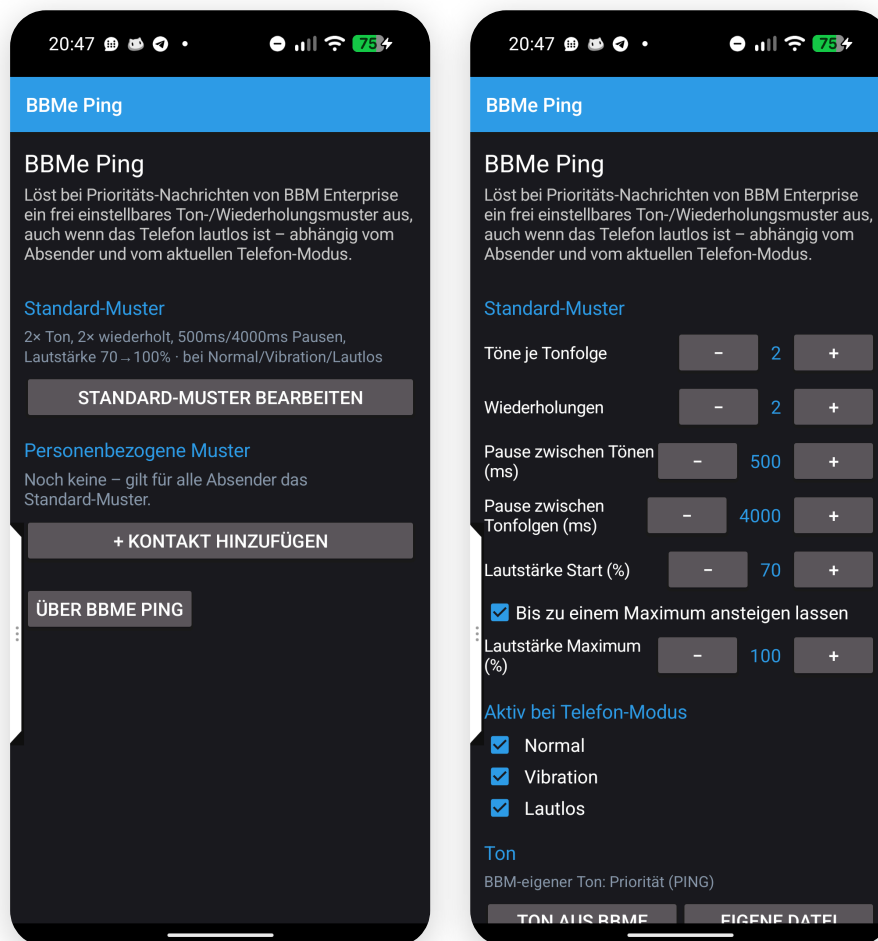

Free

Open source (GPLv3)

No BBM code

What's inside

A small selection – the full, illustrated guide is available separately.

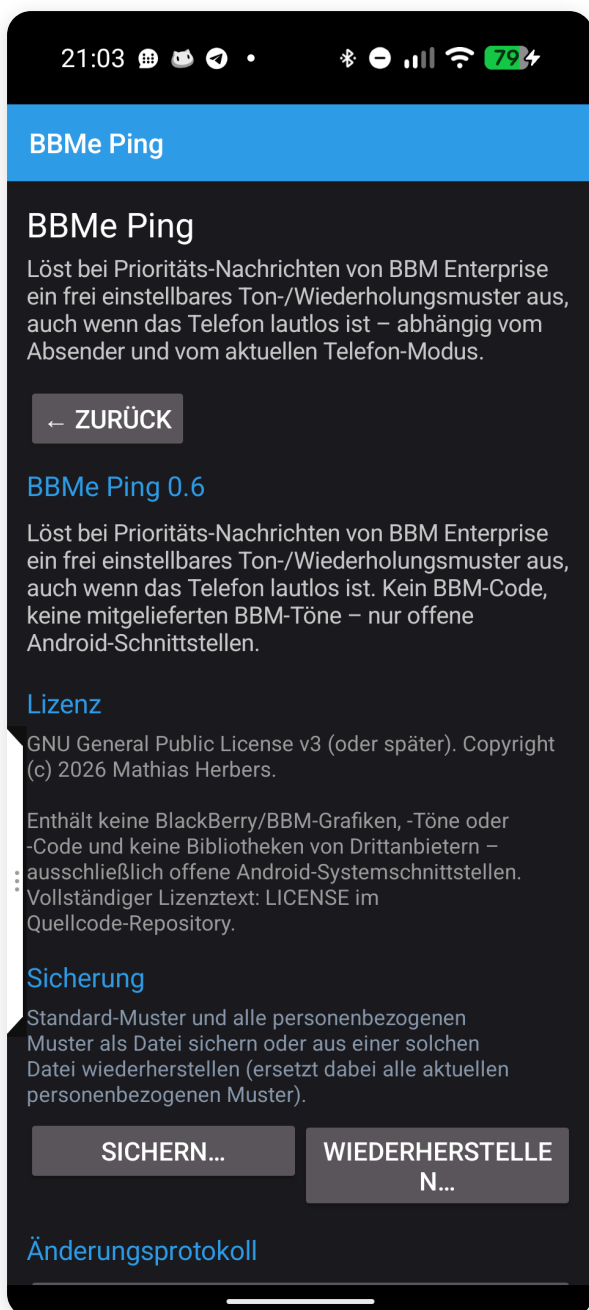

A sound straight from BBMe

Lists the sounds of the installed BBMe Enterprise app directly and resolves them against its own resources – without ever copying a file. Adapts automatically if BBMe ever changes its sounds.

Freely configurable pattern

Tones per sequence, repeats, gaps and volume (optionally ramping up) – all freely combinable, individually enabled per phone mode, and overridable per contact.

Backup & restore

Export the default pattern and all per-contact patterns to a text file, or restore them from one – handy before a reinstall or when switching devices.

No stealing from the developer

No BBM sound file is ever copied or bundled: automatic mode only reads the sound at runtime from the incoming message's notification channel, and the direct picker resolves BBM's own resources live against the installed app. Fully open source under GPLv3 on GitHub.

System requirements

Android	10.0 (API 29) or newer.
Notification access	needed to detect BBM priority messages at all – granted via its own system screen, not a normal runtime dialog.
Contacts read access	optional, only for per-contact patterns.
BBM Enterprise installed	optional – only for "Choose a sound from BBMe" and automatic sound detection; without BBM, only "Choose custom file" works.
Alarm volume	should be set to an audible level – the tones are deliberately routed through this channel so they still get through in "Silent" mode.

Try it yourself

Source code, build instructions and a ready-made APK are available on GitHub:

github.com/8818freak/BBMePing. No Gradle, no hidden dependencies, no account needed. Feedback and ideas are welcome.
